

## **InfoAsset Planner Bullet Points**

- This ordinance is necessary to waive competitive bidding requirements
  - InfoAsset Planner software is a product of Innovyze Inc., and will integrate seamlessly with the City's Water Distribution System model software, InfoWater by Innovyze, Inc.
  - As recommended in the recently completed Water Distribution System Model and Master Plan, Innovyze InfoWater model data, along with other data such as GIS data, CityWorks data and Xcel spreadsheet data, will be imported into InfoAsset Planner to develop a comprehensive Water Main Replacement plan using a risk-based renewal and replacement approach.
  - InfoAsset Planner output will result in consistent water main replacement ratings, which is essential to ensuring that the annual Water Main Replacement Program is accurate when planning future water main replacements and determining funding needs.
  
- This ordinance reappropriates funds from the 2020 Watermain Replacement Program.
  - Funds available due to projects being completed under budget
  - Authority to expend these funds has already been granted under Ord. 58-20.
  
- The InfoAsset Planner approach will replace a manual process of evaluating water mains and ranking them for replacement. Water mains must be re-evaluated annually, at a minimum, to incorporate new water main breaks. InfoAsset Planner will have the capability to evaluate the City's 1,200 miles of water mains, versus the current case-by-case evaluation process.
