Toledo Fire Department  
545 N Huron St.  
Toledo, OH 43604

Streamline Automation Systems, LLC develops, markets and supports our proprietary systems used for Streamline Inspections. Our proprietary SaaS (Software as a Service) technology is the only one of its kind in the industry that is a 100% cloud based administrative portal with the option to license the Streamline Inspections Apple iPad or Windows Mobile Tablet application directly to the cloud database. No other solution on the market can claim to be completely cloud based and work in off-line mode with iPad devices or Windows Tablets in the field to the extent to which our software allows. Our solution combines features like a Permitting module, a module for Community Risk Reduction (CRR) to include home safety surveys and smoke detector installs as well as a smoke detector database. An optional Risk Assessment module is now also available to create risk assessment profiles of properties and place them on heat maps in the system. We also support customer portals for Self-Certification of violations and e-mail templates to send notifications. All components of our system are designed and produced by Streamline Automation Systems in Roseville, California.
