

**DPU – Plant Wide Facilities Plan Ordinance
Water Reclamation**

Bullet Points

- Many of the facilities at the Bay View Water Reclamation Plant are over 30 years of age and are beyond the intended service life, which if kept in service would threaten the operational integrity and jeopardize the NPDES discharge permit of the plant.
- The Plant Wide Facilities Plan will analyze the entire plant treatment system and collection system and develop a facilities plan to renovate, update and replace the existing systems as needed to continue to provide service for the future.
- The Division of Water Reclamation advertised for and received proposals for professional engineering services to conduct the study.
- This ordinance authorizes the appropriation and expenditure of up to \$1,000,000 for professional engineering services related to the Plant Wide Facilities Plan.
