

STORM WATER BILLING PHASE 2

Bullet Points

- The Stormwater Billing update and Impervious Mapping Phase 1 Project was authorized by Ordinance 124-19.
- The project included reviewing the current policies for stormwater billing, performing impervious mapping using remote sensing technology, and updating the City's Equivalent Residential Unit (ERU) database.
- This phase will merge the ERU database and the City of Toledo Billing database (SAP), along with developing a process and procedure to keep the two databases in sync. It will also perform a cost of service analysis of the Stormwater Utility.
- Funding for this work is available from the Stormwater Capital Improvement Fund.
