

DPU/DPS Concrete Truck Purchase - \$320,000
November 26, 2019

- Truck will be used to make concrete on demand without the need to order it from a manufacturer
- Crews can make the exact amount needed for a job without having any waste
- Concrete will be less expensive to make since the City of Toledo will be purchasing the dry goods to make the concrete
- Crews have had times when concrete was not available; this truck will eliminate that issue
- The City of Toledo will save on short load costs. Short load charges occur when a minimal amount of concrete is order which raises the cost of a yard of concrete
- Cuts the time out for waiting to get concrete from a vendor
- Truck makes any type or quantity of concrete needed
- No limit to how much we need to purchase
- Can save up to 40% the cost to purchase concrete locally
