

DPS – LSC Alternate Daily Cover, Hoffman Road Landfill

- The Hoffman Road Landfill is required to apply an approved daily cover (ADC) at the Hoffman Road Landfill in accordance with OAC 3745-27-19 to control fire hazards, blowing litter, odors, insects, vectors, and rodents.
- The primary ADC used at the landfill is auto shredder residual, which is a revenue generating ADC. However, the landfill will continue to use a concover material intermittently on an as-needed basis to maintain regulatory compliance.
- LSC's product (VERDac™) is more cost effective than the previous ADC used (almost by half) and has additional properties making it more desirable.
- VERDac™ landfill cover is a spray-applied mulch and mineral mortar slurry comprised of water and a proprietary combination of wood fiber, powdered clay, adhesives, and water conditioners.
- SEP is requested.
