

PID113269-Pedestrian Safety Improvement Program

Project History:

In 2019, Ohio Department of Transportation (ODOT) invited eight Ohio municipalities to participate in a Pedestrian Safety Improvement Program (PSIP) for implementation of low to medium cost countermeasures along high risk facilities. ODOT has committed to spend a maximum of \$1.3 Million on Toledo arterial and collector roads using eligible countermeasures from a list they provided. This list includes items like pedestrian curb ramps, high visibility pavement markings, pedestrian refuge islands, pedestrian hybrid beacons (PHB), rectangular rapid flashing beacons (RRFB), pedestrian countdown signals and signage.

Location Selection:

Locations were selected using a committee including representatives from City of Toledo Transportation and Engineering Services, TMACOG, ODOT and a Toledo Safe Routes to School Coordinator. Not all projects chosen by the group will make it to construction given that detailed design and estimates will be needed and the project cap is set. Locations were chosen and ranked in the following order:

1. Large impact projects, high profile projects
2. High pedestrian accident locations
3. Safe Routes to School locations
4. Downtown high pedestrian areas

Project List:

The following projects are known to be funded at this time. Additional pre-approved projects will be added if the construction costs allow.
