

**Supporting Information for DPS Longfellow School Site Project – up to \$125,000
October 29, 2019**

- The Longfellow School Site has been vacant and surrounding residents desire that it be transformed into a city park
- Several public meetings, and numerous conversations with residents have identified that the space should be constructed for relatively passive use
- Passive use in this case will be defined as installation of a walking path, a small complement of benches, an appropriate selection of new trees, and rehabilitation of the land's surface to accommodate a better field playing surface in the center of the park for use by youth athletic teams for practice
- This work is also intended to address drainage issues that were created at some point during the past several years

Funding will be from funds already set aside for this project in 2018.
