

DPS Pool and Chemical Feeder Systems - \$12,000

- The City of Toledo pools require the addition of chlorine to the water to maintain a safe swimming environment for users
- This is currently done manually, allowing for inconsistent application and human error
- The purchase of chemical feeder systems will automate this operation, making us better able to maintain a safe and healthy chemical balance in the water
- The automated feeders will also save money by reducing the overall use of chlorine
- This investment is also recommended by the Lucas County Health Department, and will assist us in being more compliant with regulations.
