

**DPS – Contract with Edward Kelly & Sons, Inc, Cleaning and Rehabilitation Stormwater Control Features, Hoffman Road Landfill**  
**\$200,000**

- The work includes removing existing vegetation and plant growth from within and around each pond, managing stormwater from each pond before and during the project, removing accumulated sediment to the grades shown on the construction drawings, transporting removed sediment from the ponds to designated locations at the landfill and repairing/restoring/replacing the water outlet controls on one of the 3 ponds
- The city received a new landfill permit from the Ohio EPA in June 2021. A permit stipulation was that stormwater sedimentation ponds would be surveyed annually and cleaned out if sediment was above a certain elevation. Each of the three current ponds requires cleaning to comply with permit conditions and OAC 3745-27-19
- A survey of each pond was completed, bid documents prepared, and bids received to complete the work in 2021
- Time is of the essence as weather conditions in late fall/early winter could hinder effective execution of the project.
- If approved, this legislation will allow the city to issue an intent to award/notice to proceed such that the work can be initiated while weather conditions can be anticipated to be reasonably favorable.
- SEP is requested.
