

DPS – Hoffman Road Landfill Equipment

April 16, 2019

- Agreement to accept and deposit revenues generated from receiving alternate daily cover materials
- The division is required by Ohio EPA to apply daily cover to the active working face. EPA regulations require at least six inches of soil or other agency approved alternative materials to be used as alternate daily cover
- The division is currently approved to use a concover material that is sprayed daily on the active working face. The division has a contract with a vendor to purchase this material and maintains equipment that is used for the daily application
- We have worked to identify additional alternatives that may be approved to be used as an alternate daily cover that meet Ohio EPA criteria and have the potential to be revenue generating and/or reduce costs spent on purchasing concover
- We are currently reviewing the potential to use auto shredder residuals (ASR) as daily cover. Benefits of gaining approval to use ASR (or other approved material) include reduced operational costs and the potential to generate revenue
- If approved, this legislation would allow the city to enter into an agreement to accept materials that may be approved by the agency for daily cover and deposit revenues from accepting these materials
- SEP is requested.
